Intelligent Access™

Secure staff and premises... ...save time and money

Securing staff and premises are essential tasks, for which **Intelligent Access**™ delivers instant, accurate and user-friendly solutions. This unique system gives you real-time control of premises and staff with specific security rules configurable per staff group/individual/business area.

Our product offers the flexibility to cater for all site and building layouts and vehicle or personnel entrance types. We integrate secure door entry, internal access control, vehicle access, mobile security and audits of field-based contractors. A broad range of access technologies are supported by our software including proximity key fobs and cards, biometric fingerprint and handscan, turnstiles and barriers and visitor intercoms with remote door control.

All Intelligent systems are tailored to suit your exact requirements with the benefit of offering true flexibility for future change and growth. Our user-friendly one card solution can be used to access a building and then log on to our Time and Attendance system if applicable.

This enables you to:

- Protect your site and employees from unwanted intruders
- Restrict personnel access to specific areas at particular times
- Know instantly who is on site at any time; vital in a fire or emergency situation
- Ensure T&A and access control information is synchronised and has up to the minute accuracy

Features

Induction procedure

This will record all relevant personal information (to your own spec) on employee, visitor or contractor induction. The information stored can include trade, skills demonstrated or required, health and safety records as well as who performed the induction, at what time and whether any further activity or assessment is required.

ID Cards

The major benefit of using ID cards is the ability to record relevant personal information for each employee, visitor or contractor. Access to different areas of the site can be controlled by recent health and safety info contained on the card. For example if one of your staff is trained in first aid, a Fire Marshall or holds a license to operate specific machinery. Visitors' and contractors' badges will only allow them access for a specified period i.e. between set times.

Visual Pop-ups

Visual pop ups can be scheduled to flag your attention to anyone trying to gain site access whether successfully or unsuccessfully, without the need to run reports.

Immediate Evacuation

The immediate evacuation reporting in Intelligent Access™ is a critical component for health and safety procedures. These reports can be configured to export immediately to PDF, printer or PDA.

Reporting

The efficient and real-time, webbased reporting module enables you to see exactly who is on site at any time. Reports can be programmed for automated send as email or straight to printer.

Reports can be made by responsibility, company, or identity and can monitor patterns to identify any potential risks of staff or contractors not meeting deadlines.

Turnstiles and Barriers

Isys offer a wide range of Turnstiles, from full to half height, with a variety of finishes to suit all locations. Many other access control options are available from card, push button intercom to keypad, providing secure entry and exit for restricted areas. These provide secure access at perimeter and internal sites, can control and monitor pedestrian or vehicle flow in high traffic areas.

The Isys range of Car Park & Raised Arm Barriers are designed for stand alone use or with Intelligent Access™

Visitors and Contractors

Intelligent Access™ allows Visitors and contractors to be configured in the system to grant/deny them access to the zones you have pre- defined. By assigning a 'Leaving Date' for visitors and contractors they will be automatically denied access once the date comes round even if they do not hand back any passes/codes they have been issued.

Guard Patrol Module

The guard patrol module of Intelligent Access™ is an inexpensive, simple and effective tool for monitoring your security guards' movements around site.

Using a Digitool and strategically placed Dallas Chips in conjunction with our guard patrol software, you can track and ensure that the whole perimeter has been visited and security verified.

- Track security guards around site
- Monitor security and risk areas
- Streamline processes
- Powerful reporting functionality, cutting administration time and costs
- Fully integrated with our Access Control software or standalone
- Full implementation, configuration and training available
- User Friendly

An integrated messaging system allows employees to share messages with their managers, and vice versa.

CCTV

A range of security cameras can be linked to specific actions or movements on site, for example triggering a higher resolution image capture when entering or leaving a door, or when clocking on or off shift.

Intelligent Access is compatible with a huge range of cameras and recorders and as such we can fit a solution that can meet any special requirements your site may have.

- Real-time control of premises & security risk
- Remote camera viewing & configuration via PC or Web connection
- Internal & external cameras, fixed or mobile with movement sensors
- Rapid random date access archive of all images
- Camera compatibility for low-light or other special requirements

Floor Planning

Ever wondered how many doors you have controlled? Thinking about maintenance but have no idea of the location of the faulty door?

Intelligent Floor Planner enables a customer to create a mirror image of their premises and then insert all the control equipment they have on site into the plan.

Remotely security can now:-

- See visually the location of all control devices
- Remotely lock or unlock a door, gate turnstile etc
- Check the movement records in an area
- Identify any forced entries

Car park management

You will know exactly how many vehicles are parked in your car park at one time, making you aware of the number of free spaces available. This allows you to schedule parking availability, restricting some staff to their working hours, for example for contractors or weekend staff.

Intercoms

The visitor panel intercom is a solution that links up the outside intercom via a phone push button to an internal receiver in a fixed location such as the reception area. This external single point intercom will, once activated from the outside, will buzz or ring alerting the recipient of their presence.

Benefits of Intelligent Access Control:

- Real-time control of premises & staff
- Specific security rules per staff group or individual
- Multiple hardware options for doors, barriers, turnstiles, gates etc
- Instant alerts for system administration, illegal access attempts etc
- Reduced costs arising from break-ins and damage/theft
- Web based option
- Cost effective
- IP addressed proximity reader
- Single CAT 5 cable per door for easy installation
- Up to 250,000 cardholders
- Power over Ethernet
- Package includes (Edge solo kit, Electro mag lock, Push to exit button- Break glass, Edge solo software, Power supply, ten proximity cards or fobs)
- Biometrics compatibility
