

Intelligent Job Costing™

Real Time Data Capture for Total Cost Control

isys 
Intelligent Job Costing™

Microsoft
GOLD CERTIFIED
Partner

Intelligent Job Costing™ streamlines your workflow, offering significant improvements in data capture, accuracy, administration, management, analysis and reporting.

As well as improving efficiency in manufacturing & distribution environments, (logging hours against job or batch codes), Intelligent Job Costing is also used by design, service and support businesses to log time against project, cost centre or budgetary codes.

New Job details are entered from your existing job & order processing systems and Job & Payroll accruals are then output to your preferred invoicing and finance systems.

Benefits:

- Significant time saving by elimination of re-keying of job or payroll data
- Automatic output of job data to Invoicing and Payroll systems
- Budgets for time and cost and percentage completion
- Analysis of Employee performance against target
- Reporting of performance / profitability / exceptions etc.
- Multi-user software supports network wide use & access to data

Cost Centre Management

With cost centre management, employees' hours can be allocated to cost centres set within the software. You can manage and review time spent in particular cost centres, tracking movement between centres and detailing exact hours worked.

Typically an employee has a default cost centre, however at any time the employee can change cost centre by using a customised keypad on the terminal or via a web interface.

Alternatively, your manager can use the software to edit an employee's hours prior to or after the event.

Dependant on the number of terminals in operation, cost centres can be assigned to terminals. For example, if an employee clocks in at Site 1 in the morning and then travels to Site 2 in the afternoon; (providing he has clocked in at each location) the system can track time spent at both sites, and calculate the travel time in-between.

Reporting

We provide many universal cost centre analysis reports for our users. Management can easily see the split of employees' hours, worked across varying cost centres, providing employee and group totals.

An increasing number of businesses are beginning to recognise the improved efficiencies and added security benefits of an integrated approach to workplace management. Our Job costing system can be used as a stand alone product, or will integrate fully with Time and Attendance, as it is built from the ground up to integrate easily with Payroll, Personnel & HR, Access Control and other software and hardware based business solutions. These range from single locations to multiple sites where access to the system can be accessed centrally, remotely or locally controlled.

We use cutting edge technology and create business solutions that give you greater control, save you money and allow easier interaction with your workforce.

As many businesses move towards a single card solution for Access Control, Time and Attendance and other commercial systems, we have positioned our Job Costing product to offer an efficient one-card solution, allowing employees to carry one card or fob for all data requirements.

Technical innovation is paramount in our product development. Our software solutions are developed in house which means we can provide the most advanced and up-to-date technology that can be tailored to fit your specific business requirements.
